

365REMAN

EXTENDED PROFILE

OVERVIEW

365REMAN is remanufacturing software built on [Microsoft Dynamics 365 Business Central](#).

It pairs full ERP capability with the core tracking, disassembly, and inspection workflows that remanufacturers run every day. Remanufacturing is not repair, and it is not standard manufacturing. Returned cores arrive in different conditions and carry different values. Inspection results decide whether a core gets reused, rebuilt, or scrapped.

Disassembly breaks an assembly down into recoverable parts instead of building one up. Core deposits, credits, fallout rates, and warranties move margin and cash daily. Most ERP systems were never designed for this, so teams end up running the hardest parts of the business in spreadsheets.

WHAT 365REMAN HANDLES:

- **Core tracking inside the ERP:** Track cores by item and customer, manage deposits and credits, watch aging, and keep clear visibility into core liability. You get tighter working capital control and less financial exposure.
- **Inspection-driven inventory and planning:** Capture grading and inspection results and use them to set inventory status, production decisions, and financial outcomes automatically. Returned cores move through faster and yield improves.
- **True reverse disassembly:** Use reverse bills of materials to tear down cores, recover usable components, and return them to inventory accurately. Throughput goes up, waste goes down, and you recover more material.
- **Financial control tied to operations:** Connect core activity, fallout rates, warranties, and returns directly to the financials for stronger auditability, better forecasting, and more reliable margins.
- **A platform that scales:** Standardize on one system that supports new product lines, new facilities, and acquisitions, so you can step away from spreadsheets and manual tracking as you grow.
