

EPROMIS ERP

EXTENDED PROFILE

OVERVIEW

Based in Houston, USA, ePromis Solutions offer a range of business applications, which integrate to become modules of a larger system. This integration with other modules means there is no need for the duplication of data entry across the organization. The overall ePROMIS platform is designed to avoid departmental silos of data.

ePROMIS ERP is a customizable solution with industry-specific functions. In addition, the ERP platform comes with User/ Role-based access control, interactive graphical user interface, real-time dashboards, and integration with other standard business tools. Business Intelligence dashboards provide a graphical overview of the entire system – with reporting and analytics on key real-time data.

ePROMIS ERP is available in the cloud, on the web, as a hybrid, and as a client-server solution. Cloud deployment enables secure, real-time access to the system from any location worldwide, with mobile access available through native Android and iOS apps. This supports multi-location, multi-company, multi-currency, and intercompany accounting.

ePROMIS offers a support portfolio staffed by experts who follow industry best practices. Support can include consultation on customization for cloud, web-based, hybrid, and on-premises infrastructures; implementation services; managed services; support and maintenance; and training and knowledge transfer.
